

STRAIGHT SIDED GREENHOUSE

Straight sided greenhouses are modular structures, which can be adapted in order to fulfil every space requirement. This line is available with curved and peaked (recommended for snowy areas) roof.

Extremely resistant, 2 - 3 mm thick tubing of galvanized iron.

This model is the most popular among professional greenhouses for the plant and flower growing industry. It meets all end customer needs in terms of covering and type of opening with tailor-made design and manufacturing.

TECHNICAL SPECIFICATIONS

- Hot or Sendzimir Z 275 galvanized iron structure, highly resistant to corrosion
- Tie-beam and reinforcement dimensioned according to the place of installation and the type of crop
- Arch spacing 1.50 - 2.0 - 2.50 m
- The roof design varies from the traditional curved shape to a peaked version (recommended for snowy areas)
- Single or double long-lasting/anti-drip film covering
- Films fixed by means of aluminium profiles (wide range)
- Manual or motorized sidewall opening
- Single or double motorized roof opening
- Possibility to include curved purlins and film or polycarbonate skirt
