## ACCESSORIES FOR GREENHOUSES

To complete your structure, Cofeal offers you a wide range of accessories, conceived and manufactured with the same high quality design criteria applied to greenhouses so as to create proper integrated systems. Our arches, straps, gutters, aluminium and PVC profiles for doors, plain and machined tubes are extremely sturdy due to their thickness and highly resistant to corrosion thanks to the applied hot galvanizing process, which also ensures a long durability. In addition, their innovative design and the great modularity of all components enable us to fully meet the needs of our customers, thus ensuring the ideal solution for every space and necessity.

### Aluminium and PVC profiles and clips

Films are secured by press-fitting two PVC profiles into special aluminium profiles, which are fastened to the structure with self-drilling screws and/or straps of galvanized iron.

### Gutters

- Made of iron and extremely sturdy, thanks to the thicknesses they are produced in (2 or 3 mm).
- HOT-DIP galvanized (from 450 to 550 g/sq m thick zinc) highly resistant to corrosion and consequently, extremely durable.
- Galvanized fasteners.
- Our gutters are manufactured at our facility and perfectly fit the supports, they can be "hot-dip" or "Sendzimir" galvanized with various thicknesses.
